Version: 4.0

Question: 1

Which statement is true about the use of data controls in JSF? (Choose the best answer)

- A. Only Oracle ADF Business Components can be exposed as data controls.
- B. Dragging a data control onto a JSF page generates a Java class that acts as a managed bean
- C. An XXXpagedef xml file holds detailed information about a JSF page's use of data and operations exposed through ADF Data Controls
- D. Data controls eliminate the need to use expression language in your JSF code for binding the UI to data
- E. A Databindings cpx file holds names of managed beans that you map to UI elements

Answer: D

Question: 2

Which statement is false? (Choose the best answer)

- A. A panelDashboard has the same rowHeight (or all the rows)
- B. AFStretchWidth in the style class of a panelGroupLayout causes it to fill the page horizontally
- C. panelGroupLayout cannot have a vertical scroll bar
- D. panelBox stretches if placed inside a panelStretchLayout center facet

Answer: C

Question: 3

Which two statements are true about a dvt:gauge component? (Choose two.)

- A. dvtthresholdSet with dvtthreshold tags can be used to define ranges of data and coloring for a gauge
- B. The style of the dial in a dial gauge is fixed
- C. A gauge component can render as a vertical status meter.
- D. Gauge data range must start from 0.

Answer: A, C

Question: 4

Consider a bounded task flow input parameter called employeeld of type oracle.jbo.domain.Number. When defining the parameter in the bounded task flow, if you do not define a value (destination) for

the parameter, where does it get written to? (Choose the best answer.)

- A. #(employeeId)
- B. #{employee.employeeId}
- C. #{pageFlowScope employeeId}
- D. #{pageFlowScope employee employeeId}
- E. #{backingBeanScope employeeId}
- F. #{backingBeanScope employee.employeeId}

Answer: C

Question: 5

Which two scopes can you use to make a value in a managed bean available for at least three pages in a task (low)? (Choose two.)

- A. request
- B. pageflow
- C. view
- D. application
- E. server

Answer: B, D

Question: 6

Which three objects can the "Create business Components from Tables" wizard create? (Choose three.)

- A. query-based view objects based on database tables
- B. application module
- C. entity objects based on database tables
- D. entity object Java classes
- E. application module Java classes
- F. nested application modules

Answer: A, B, C

Question: 7

Which three statements are true about declarative features of view objects? (Choose three.)

- A. You can use view object bind variables to parameterize a view object where clause with values supplied at run time.
- B. By default, a view object instance retrieves all database rows into the view object cache.
- C. To implement master-detail behavior between two view object instances, you define an

association between those instances.

- C. a view accessor defines a validation expression that you apply to a view object attribute.
- E. A view object can include attributes whose values are based on SQL expressions rather than mapping directly to a database column
- F. A view object definition can include many view criteria but you can choose which view criteria to apply for each view object instance.

Answer: A, C, E

Question: 8

Which three statements are true about the default value for an entity object attribute? (Choose three.)

- A. it can be a literal value.
- B. it can be defined by a Groovy expression.
- C. it can be defined by a SQL select statement.
- D. it can be defined by an Expression Language (EL) statement.
- E. it can be defined by referencing a database stored procedure.

Answer: A, B, D

Question: 9

A backing bean for a page must hold its value over multiple requests for the current user. Which three bean scopes are applicable? (Choose three.)

- A. requestScope
- B. backingBeanScope
- C. viewScope
- D. pageFlowScope
- E. sessionScope
- F. applicationScope

Answer: C, D, E

Question: 10

Identify three statements that are true about JSF. (Choose three.)

- A. Components are used to define page structure.
- B. Navigation between pages is defined outside of the JSF page in the metadata.
- C. Managed beans can have only one of two memory scopes.
- D. Managed beans can be accessed from more than one page.
- E. JSF does not support template creation for pages.

Answer: A, B, D
